Patent claims.

1. A container (1) comprising a cup-type compartment (2) having an opening (3) and comprising a cover (4) to be placed on said opening (3),
said cover (4) having an inner component (5) and an outer component (6) detachably connected to said inner component (5), between said inner component (5) and said outer component (6) connected to the inner component (5) a cavity (7) being formed for receiving one object (8) or more objects (8), said cavity (7) comprising two main surfaces (9, 10) being parallel to one another,
characterized by that
the two main surfaces (9, 10) of the cavity (7) are at an angle of $0° < \alpha < 90°$ to an opening plane (11) formed by the opening (3).

2. A container (1) according to claim 1, characterized by that $3° < \alpha < 70°$, preferably $10° < \alpha < 50°$, most preferably $10° < \alpha < 30°$ applies, however the above limits may be combined with each other in an arbitrary manner.

3. A container (1) according to claim 1 or 2, characterized by that the container (1) is a beverage container.

4. A container (1) according to one of claims 1 to 3, characterized by that the opening (3) has a circular cross-section.

5. A container (1) according to one of claims 1 to 4, characterized by that the cavity (7) is cylindrical, and that the main surfaces (9, 10) of the cavity (7) are cylinder front surfaces.

6. A container (1) according to claim 4 or 5, characterized by that, when the cover (4) is placed on top, the axis A of the opening (3) and the axis B of the cavity (7) are radially offset relative to one another by X = 1 to 20 mm, in particular 3 to 10 mm, and are at an angle α relative to one another.

7. A container (1) according to one of claims 1 to 5, characterized by that the inner component (5) and the outer component (6) each comprise an aligned drinking straw opening (12, 13) for introducing a drinking straw (14) into the compartment (2) provided with the cover (4), the drinking straw openings (12, 13) being arranged outside the cavity (7).

8. A container (1) according to one of claims 1 to 7, wherein a disk-type object (8), in particular a round or shaped CD, preferably a mini CD, is placed into the cavity (7).

9. A container (1) according to claim 8, wherein the outside diameter of the disk-type object (8) is identical to or 0.01 to 5 mm smaller than the inner diameter of the cavity (7).

10. A cover for a container (1) according to one of claims 1 to 9, wherein the cover (4) has an inner component (5) and an outer component (6) detachably connected to said inner component (5), between said inner component (5) and said outer component (6) connected to the inner component (5) a cavity (7) is formed for receiving one or more objects, said cavity (7) comprising two main surfaces (9, 10) being parallel to one another, and wherein the two main surfaces (9, 10) of the cavity (7) are at an angle of $0° < \alpha < 90°$ to a closing plane (11).
